Ice Maker Pull Stop Box™

LynCar is excited to introduce the Pull Stop Box™ for automatic ice makers. The ice maker Pull Stop Box™ provides a sleek and sophisticated finished look. The decorative knob controls the flow of water to the supply line by actuating the valve in a push/pull motion. The box is strong, compact and cost-efficient.

LEAD FREE

In conjunction with LynCar's lead free initiative, all models of the ice maker Pull Stop Box™ are lead free.

COST-EFFICIENT

The ice maker Pull Stop Box™ is cost-efficiently designed to save money in material costs compared to traditional ice maker outlet boxes.

MORE COMPACT & STRONGER

The ice maker Pull Stop Box™ requires a smaller cavity in the wall for installation. Its compact design also allows it to resist torquing when installed with PEX piping.

PROTECTIVE COVER

The ice maker Pull Stop Box™ has a snap-on, protective cover to shield the valve during drywall installation.

PUSH/PULL KNOB

The simple, intuitive push/pull action of the ice maker Pull Stop Box™ knob starts and stops the flow of water easily. The ice maker Pull Stop Box™ was designed with a decorative knob that cannot be removed while the valve is in the "on" position.

REPLACEABLE VALVE

Removal and replacement of the brass valve can be done in under a minute with only the use of a screwdriver. Simply remove the valve block and valve, then install a new valve. It's that easy!

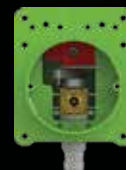

Part#	Description
